EDUCATION

Degree	Specialization	Institute	Year	CPI
B. Tech	*Computer Science & Engineering(AI&ML)*	GVP College Of Engineering For Women	2022-Present	7.58
HSC BIEAP	*Physics, Chemistry, & Mathematics*	Sri Chaitanya Junior College	2022	7.61
SSC TS	-	ST. Georges High school	2020	10.0

WORK EXPERIENCE

- **Machine Learning Intern** *[Coding Raja Technologies]* *Apr-May 2024*
  - Developed a Customer Sentiment Analysis model to help the marketing team identify trends and patterns on purchased goods. Implemented a **Convolutional Neural Network(CNN)** to perform object detection , achieving 92% accuracy in identifying product images from posts. Worked on Python libraries (**NumPy & Pandas**) for data extraction , cleaning & manipulation. Applied ML algorithms to **classify the features** which resulted in **improvement in the speed of analysis.**
- **ML And Data Science Intern** *[ExcelR]* *June-July 2024*
  - Developed and optimized an **ML pipeline** using Random Forest , Gradient Boosting **classifiers** & Logistic Regression & SVM **algorithms** in predicting Diabetes achieving 89% accuracy with the goal of providing early detection insights with **low cost at convenient place to users**.
  - Conducted comprehensive **Exploratory Data Analysis** on a dataset of 10,0000 + patient records , and performed **data cleaning and feature engineering** to prepare the data for the predictive model.
  - Collaborated with the team to build a user friendly interface , allowing for real time predictions based on patient inputs using **Streamlit** . Created reports and visualizations to communicate model findings to a non-technical audience

PROJECTS

- **Taxi Fare Prediction System** *[Pyspark & Streamlit]*
  - Developed and deployed a scalable taxi fare prediction application using **PySpark MLlib and Streamlit,** performing data preprocessing, feature engineering, and regression modeling (Linear Regression, Gradient Boosted Trees) on large-scale NYC datasets for real-time fare estimation.
- **Diabetes Prediction Using ML** *[ML models & Algorithms]*
  - Developed a machine learning application for early-stage diabetes prediction using **Logistic Regression, SVM, and Random Forest**, with an interactive Streamlit UI and GitHub integration for accessible healthcare decision support.
- **Blood Group Detection Using Image Processing And Fingerprint** *[ML models & Algorithms]*
  - Designed a non-invasive blood group detection system using fingerprint patterns and image processing techniques with Python (**OpenCV, NumPy, scikit-image**). Applied ridge frequency analysis and Gabor filters for **biometric feature extraction**, integrating biometrics with medical diagnostics for faster and accessible blood group determination.

EXTRA-CURRICULAR ACHIEVEMENTS/ACTIVITIES

- Runner-up in **Throw ball** at Inter-Branch Tournaments twice**.**
- Actively participated in Badminton.

TECHNICAL SKILLS

- **Programming Languages & Databases:**Python, C , MySQL
- **Technologies and Concepts:** ML , BIGDATA Statistics(useful for Modeling , Analysis).
- **Tools and Platforms :** GitHub ,VS Code ,Google Colab , Excel &Docs.

SOFT SKILLS

- Problem Solving
- Team work & Communication
- Time Management
- Adaptability.
